

There's a lot out there that
can harm your network.
Together, there's a lot we
can do to help.

Today, security breaches are more prevalent than ever before. Because of the need to communicate and collaborate via the Internet, it is crucial that companies adopt advanced security tools. But keeping your network and desktop systems safe is about more than implementing the latest technology. You need the right people, the right practices, and the right resources.

That's why Microsoft developed the Security Readiness Kit. In this kit, you'll find essential resources, the latest security tools, and step-by-step guidance to help secure your e-mail, set up a VPN, download the latest security patches, and more. The new scenario-based interface makes it easy to navigate, and our new "Check for Updates" feature ensures you have the most current information. Order your free kit today and take advantage of the following resources and more:

SECURITY NOTIFICATION SERVICE Free e-mail notification when new patches become available.

MICROSOFT® BASELINE SECURITY ANALYZER Scans Microsoft Windows®-based computers for security misconfigurations.

SOFTWARE UPDATE SERVICES (SUS) Helps to quickly deploy critical updates to servers and desktop systems.

866-PC-SAFETY Free virus-related support for Microsoft products. (U.S. only)
